## Mid-Chapter Review

## Hint

Use the charts inside the back cover.

1. Compare. Write $=$ or $\neq$ to make a true statement.
a) $8 \mathrm{bu} \neq 1 \mathrm{gal}$
b) $7 \mathrm{qt}=28 \mathrm{c}$
c) $5 \mathrm{~kL}=5000 \mathrm{~L}$
d) $4 \mathrm{cL} \not \not \equiv 0.4 \mathrm{~L}$
2. What is the capacity of each can in millilitres?
e.9., $1 \mathrm{~L}=1000 \mathrm{~mL}$

Large can: $3.43 \mathrm{~L} \times 1000 \mathrm{~mL} / \mathrm{L}=3430 \mathrm{~mL}$
Small can: $0.86 \mathrm{~L} \times 1000 \mathrm{~mL} / \mathrm{L}=860 \mathrm{~mL}$
3. Hans read on the Internet about a pickup truck with a fuel tank capacity of 34 gal (US). Hans buys gas in litres. What is the capacity in litres?
e.g., 1 gal $\doteq 3.79 \mathrm{~L}$, so $34 \mathrm{gal} \times 3.79 \mathrm{~L} / \mathrm{gal} \doteq 128.86 \mathrm{~L}$

The capacity is about 129 L .
4. Circle the greater volume in each pair.
a) 26 cu ft or 1 cu yd
b) 6912 cu in . or $2 \frac{1}{2} \mathrm{cu} \mathrm{ft}$
5. What can you multiply by to change one unit to the other?
a) cubic metres to cubic centimetres
b) cubic millimetres to cubic centimetres
$\qquad$ $\times 0.001$
6. Are there more cubic inches or cubic centimetres for the same volume? Why? cubic centimetres, because they are smaller
7. Madison sells cedar wood chips by whole cubic yards. A customer wants 60 cu ft of the wood chips for a pathway. How many cubic yards does the customer need?
e.g., $1 \mathrm{cu} \mathrm{yd}=27 \mathrm{cu} \mathrm{ft}$
$60 \mathrm{cu} \mathrm{ft} \div 27 \mathrm{cu} \mathrm{ft} / \mathrm{cu} y \mathrm{yd}=2 \mathrm{cu}$ yd and part of another cubic yard The customer needs 3 cu yd of wood chips.
8. What is the volume of 8.4 cu yd of gravel, to the nearest tenth of a cubic metre?
e.g., 1 cu yd $\doteq 0.76 \mathrm{~m}^{3}$
$8.4 \mathrm{cu} \mathrm{yd} \times 0.76 \mathrm{~m}^{3} / \mathrm{cu}$ yd $\doteq 6.384$, or about $6.4 \mathrm{~m}^{3}$
